Table 1

Anthropometrics, metabolic outcomes and medication at 0, 6, 12 and 24 months after the initiation in patients with type 2 diabetes randomised to a low-fat or low-carbohydrate diet and had followed the fat-restriction: ≤ 35 energy % for low-fat group (n= 20), ≥ 45 energy % for low-carbohydrate group (n= 12) at the 24 month registration.

Variable	Diet	Time point									
		0 months		6 months		12 months		24 months		P value ^c	P value ^d
			P value ^a		P value ^b		P value ^b		P value ^b		P value ^d
Weight (kg)	Low-fat	98.4±19	0.061	93.8±19	<0.001	94.5±18	0.002	94.9±19	0.001	<0.001	0.096

Abbreviations: BMI, body-mass-index; Carb., carbohydrate.

^aBetween groups at baseline

^bFor change compared with baseline

^cFor change over all time points

^dFor change over all time points between groups

^eAs there were no changes in simvastatin doses, the *t* test is not applicable

^fStatistical significant change between groups at this time point
